Complex scenarios
in the Cathlab

CONCEPT AND OBJECTIVES

Over the past 50 years, innovation in interventional cardiology has driven the field to move outside the confines of the vascular bed. Percutaneous procedural complexity and patient risk are increasing, and operators must be prepared to recognize and treat complications, which may have significant impact on patient survival and healthcare costs. We believe that colleagues may learn from each other's complications and challenging cases. In this meeting, our goal is to share and discuss, in an informal environment, challenging cases and unexpected complications in the cath lab.
